

Penetrating Spray Lube - Tech Data

ATL Inc. PENETRATING SPRAY LUBE is a High Performance Superior Synthetic Lubricant With a Myriad of Applications

FEATURES:

- Excellent lubricant, friction reducer, and corrosion preventative. It is superior to other penetrating fluids because it is developed from a lubricant base that enhances its lubricating qualities
- The base and propriety additives have inherent low volatility relative to other fluids. This allows it to stay in place longer and lubricate and protect better.
- The low viscosity makes it an excellent solvent and will serve as a degreaser for cleaning parts, and then stays in place to protect them against rust and corrosion
- The base lubricant has a much higher flash point/ lower viscosity than other oil lubricants

APPLICATIONS

- Penetrating oil releases badly rusted or corroded parts
- Rubber lubricant for particularly squeaky rubber belts
- Cleans and forms an anti-corrosion barrier
- Degreases printing machinery
- Lubricates electrical contacts, improves mechanical performance, and protects against corrosion and arc over
- Lubricates bicycles and other recreational equipment
- Lubricates and protects garage doors, openers and sliding doors
- Numerous other uses

TYPICAL PRODUCT CHARACTERISTICS

<u>TEST</u>	<u>TYPICAL RESULTS</u>
Density	.89
Viscosity, SUS @ 100°F	50
Pour Point °F	-20
Flash Point °F	298
Color	Clear, Light Straw Color
Odor	Pleasant Orange Scent
Rust Test	Pass
Copper Corrosion	1a

AVAILABILITY

16 oz. Trigger Sprayers, 1 Gallon Jugs, 5 Gallon Pails & 55 Gallon Drums, 275 Gallon Tote
